rsandoval.samara@gmail.com | linkedin.com/in/samara-ruizsandoval | +1 (786) 393-3819

Miami, FL • Open to Remote, Hybrid, or On-Site

## SKILLS

---

**Languages & Frameworks:** Go, Bash, React, TypeScript

**Cloud & Infrastructure:** AWS (MSK/Kafka, Bedrock), Microsoft Azure, Docker, Kubernetes

**Data & APIs:** REST APIs, PostgreSQL, Apple MDM

**Practices & Tools:** Git, Clean Architecture, Prompt Engineering, Testing & Debugging, Software Documentation, AI-assisted development

## WORK EXPERIENCE

---

**Jr. Software Engineer** | Addigy

09/2023 – 07/2025

*Addigy is an Apple Device Management solution for businesses, schools, and MSPs*

- Contributed 25+ endpoints to Addigy's Public API v2, a full rewrite from Python to Go, expanding external integration capabilities for third-party partners and developers.
- Redesigned ABM/ASM sync failure notifications to surface all affected policies in a single view with a bulk re-sync action, and added a daily Kubernetes cronjob as a fallback — reducing manual recovery steps for MSP customers and significantly cutting related support tickets.
- Implemented Return to Service for Apple devices end-to-end — reading Apple MDM documentation, building backend integrations, and shipping frontend UI controls — available to all customers.
- Led four Kafka (MSK) version migrations on AWS (3.5.1 through 3.8.x) — reviewing release notes for breaking changes, validating compatibility across services, and executing sequential rollouts across realms.
- Placed 3rd in a company-wide hackathon against senior engineers — built an AI-powered endpoint using AWS Bedrock that ingested Custom Software installation logs, used prompt engineering to extract structured JSON error analysis, and returned plain-language explanations with suggested fixes to end users.

**Support Engineer – Tier 1 → Tier 2** | Addigy

05/2021 – 09/2023

- Became the go-to escalation point for complex Custom Software installation issues — guiding non-technical clients through Bash scripting and log analysis to resolve failed deployments.
- Built and documented a LaunchDaemon-based Bash script to block USB device mounting, adopted broadly across the customer base and used in production for years.
- Led onboarding and technical training for new interns, sharing domain expertise.
- Conducted thorough bug reproduction and verification; documented detailed findings and communicated reports to engineers to drive resolution.

## PROJECTS

---

**BookClub App** | Personal Project

2025

*Full-stack web application for managing, sharing, and discussing books with per-chapter note-taking*

- Architected and implemented RESTful APIs in Go, applying clean architecture principles to ensure separation of concerns and long-term maintainability.
- Designed relational data models in PostgreSQL and optimized queries for performance and scalability.
- Implemented authentication and secure API access control to protect user data and endpoints.
- Containerized backend services with Docker for consistent local and cloud deployment environments.
- Deployed backend infrastructure to Microsoft Azure.
- Developed a responsive frontend in React and TypeScript, integrating with backend APIs.

## EDUCATION

---

**Florida International University**

Miami, FL • 04/2021

Bachelor of Science in Computer Science • GPA: 3.7 / 4.0

## CERTIFICATIONS

---

**AWS Certified Cloud Practitioner** — Amazon Web Services

Aug 2024 – Aug 2027
